

AER Neurological Visual Impairment Division

Greetings NVID!

AERBVI - PreConference - SAVE THE DATE! JULY 20th - 9 AM to 4:30 PM

If you're planning on joining us at [AER International Conference in St. Louis](#) this summer please mark your calendars for a pre-conference day on CVI. The title for our pre-conference is "Learning from Children and Adults with CVI About How They Live Their Best Lives" For this special day, we're honored to focus on CVI across the lifespan. The day will feature case studies, research to practice, and the highlight, a panel discussion with adults with acquired CVI. This will be an opportunity for us to learn from the varied experiences of CVI from an international group of adults with the condition. We're so very excited and honored to be able to host this day for you and we hope you'll join us. **Details for registration coming soon!**

Call for Participants - CVI Study

Our friends at Smith-Kettlewell Eye Research Institute's SeeLab are seeking participants for their work researching children with higher visual functioning differences (high functioning CVI). These are individuals four years old through adulthood with acuities better than 20/80 to 20/100 who have no significant global delays. If you know children that fit this description, please consider sharing this information with their families. The tweet contains contact information for the research team. Families will be compensated for their participation and get to contribute to the great work being done in our field.
